

WHY THE LABEL **MADE IN GERMANY** MATTERS TO US

The 'made in Germany' badge has been perceived internationally as a sign of quality for over 130 years. Customers and users around the world have always associated it with high-quality, long-lasting products, sophisticated technology, punctuality and reliability. These days, many people also link Germany with other positive traits such as environmental awareness, fairness and cosmopolitanism.

As all of these values are important to us at S:FLEX, we work hard day in, day out to make sure that our systems and services deserve to carry the label 'made in Germany'.

GERMAN ENGINEERING

Tried and tested solutions combined with carefully considered innovations. Products which deliver in practice what they promised during development. Those are the expectations levelled at German engineers – and we are only too happy to meet them.

LOCAL CONTACTS

Even with high-speed internet and global contactability around the clock, we think it's important to be able to rely on someone nearby.

FAST RESPONSES

Speed does not involve sorcery and punctuality is the courtesy of kings, as two well-known German idioms go. Many people associate these positives with the term 'made in Germany' too. We are pleased to say that some people associate them with us as well.

LONG-LASTING PRODUCTS, PACKAGED SAFELY

Our frame components may not seem as sophisticated as a German-crafted chronometer, but they can certainly rival high-end timepieces when it comes to their longevity. What's more, our transport packaging is impressive even without gift wrap.

SUSTAINABLE PRODUCTION

Germany has earned itself a reputation as a pioneer in the field of environmental protection – especially with its subsidies for solar. Our mounting systems contribute towards sustainable power generation, and we ensure that our systems themselves are also produced in an eco-friendly fashion.

LOCAL VALUE CREATION

Local value creation is defined as a region's economic performance plus output flows generated for nearby communities – and you know that can't be bad, to quote the Beatles.

FAIR TRADE MATTERS

Surveys show that, particularly in Germany, the awareness of fair trade has risen from year to year. S:FLEX ensures that its suppliers and their employees earn a decent living for their work, without risking their health. What's more, we didn't only start doing this when the new Supply Chain Due Diligence Act came into force.

SHORT INNOVATION CYCLES

S:FLEX has hands-on experience of photovoltaics. S:FLEX is also on hand at local level. Current trends in solar technology and our customers' feedback are integrated immediately and directly into new developments and the ongoing optimisation of our existing product lines.

TRUST AND RELIABILITY

Those who entrust their solar panel investment to one of our mounting systems can rely on safe anchorage, even in a storm. This is borne out by the approval of building inspection and structural authorities, tests and certificates.

COMPLIANCE WITH EU STANDARDS

When it comes to EU standards, there will always be those who poke fun at the infamous rules on the curvature of bananas. However, anyone who makes a living out of installing structural components will appreciate the Germans' penchant for strict rules and their unquestioning compliance with standards.

SOCIAL RESPONSIBILITY

Diversity, equal opportunities, inclusion and participation may not traditionally be associated with the 'made in Germany' label. However, S:FLEX is one of the companies in Germany who are committed to changing this in the future.
